

Rabbit and Mouse Home Learning Opportunities

Summer 2022

Design and build a boat. Remember to test your materials first, do they float or sink? What is your boat able to carry? How many Lego bricks can it hold before sinking? Was your design a success? How can you improve it next time?

Explore somewhere that has water. A lake, a river or even the seaside. Draw pictures of what you see, take photographs and collect some treasures. Can you recreate the scene in 3D when you get home?

Imagine you are lost on a desert island. Write a postcard to a friend or write a diary of your time. What did you see? How did you feel? How did you escape? You could even write a story of your journey under the sea to visit a shipwreck.

Explore the different oceans. Create a map and identify some of the different species which live in the different oceans around the world. Can you add the continents to your map?

There are lots of super texts about the Oceans and Sea Animals. Here are a few to try...
Commotion in the Ocean
The Lighthouse Keepers Lunch
The Storm Whale
What a Waste
The Snail and the Wahle

Get arty!

Can you build a 3D model of an ocean creature? You could even extend your learning by creating a fact file about the creature or maybe even write a story or poem about it.

Create safety poster to help ensure children are safe when playing next to open water. It is important to keep the seas and oceans clean. Create some advice for others to help!
